

Sentence:

Robert gave Christian a game and a console by mailing them to him.

O - (game & console)

R - recipient

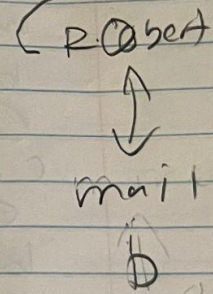

P - part (mailing) - Atar

D - destination

PP - box

verbi mailing

S - Robert

christian got the console  
and game from Robert.  
This is a past tense action  
because it happened in the  
past: the prime mailing...  
for the dependency ATDAM

The objects are game and  
console are being transferred  
from Robert to Christian  
through the mail; which  
means that the relationship  
between them is the double  
arrow. The game and the  
console were under Robert's  
ownership; the relationship  
between Robert and christian  
is indirect so double arrow  
The recipient is christian  
and that is designated with  
single arrow.

The proposed context & many  
syntactical parsing will extract  
verbs and the category for  
that verb, for verb-actiposity  
using conceptual parsing you  
have to find the proper form  
from the dictionary.

CD processed the possible interp  
in order... This can be incorrect  
so sometimes you need to consider  
context to fix
